

**PSE** PUGET SOUND ENERGY

# energizeEASTSIDE

quick facts

Puget Sound Energy (PSE) is the company that provides power to your neighborhood. Energize Eastside is a project that will build a new power substation in Bellevue and and replace an existing electric transmission line from Redmond to Renton.

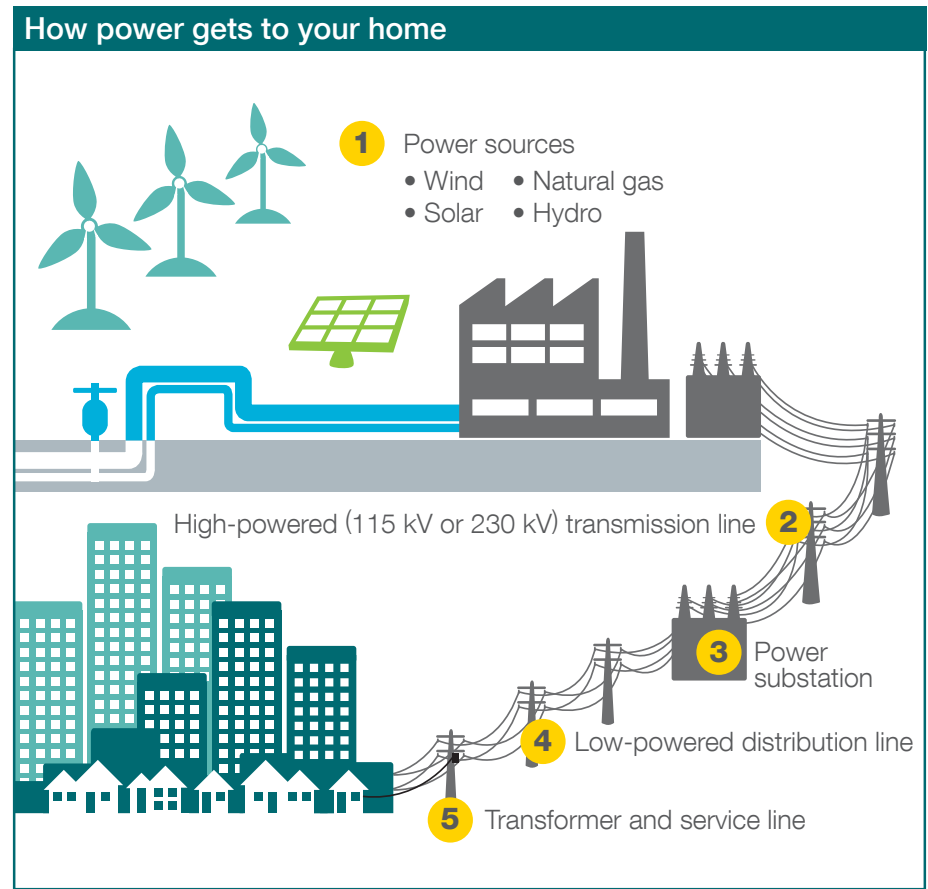

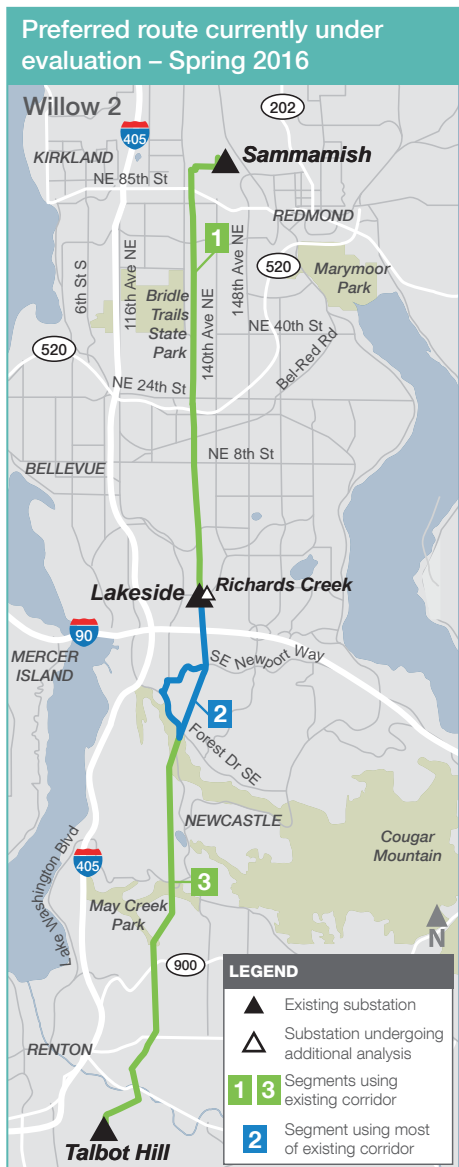

### Why is Energize Eastside needed?

The number of people living and working on the Eastside is growing. This growth is straining our electric system. The chance of power outages will increase, unless PSE upgrades the system.

### Where will PSE build Energize Eastside?

PSE is looking at different route options for where the new transmission line and substation could go. The routes will be studied to determine the environmental impacts of each route. The map to the right shows PSE's preferred route. To view the route options visit [pse.com/energizeeastside](http://pse.com/energizeeastside).

The community will have an opportunity to comment on each of the route options during Phase 2 of the Environmental Impact Statement process.

### What will Energize Eastside do?

PSE looked at several options to make sure the Eastside has stable power. Energize Eastside is the best way to solve the problem. Energize Eastside will build a new substation, replace the existing transmission line and continue meeting our aggressive conservation goals. A transmission line is a group of wires on tall poles that can move power from one place to another. This new line will bring more power to the cities of Bellevue, Kirkland, Newcastle, Redmond and Renton.

### Thank you for your interest in Energize Eastside
