### fieldwork: utility mapping

Summer 2017

As part of the Energize Eastside project, Puget Sound Energy (PSE) is conducting additional fieldwork surveys in the existing transmission line corridor. Data gathered from these on-the-ground surveys will help us refine our design and inform permit submittals.

PSE and our contractors are conducting utility mapping surveys on specific properties along the existing transmission line corridor. Our contractors Applied Professional Services (APS) and APS Survey & Mapping (APSSM) will locate and survey existing underground utilities at proposed pole locations and construction sites.

#### What to expect

- First, APS will locate the underground utilities and mark the ground with a biodegradable, non-toxic paint and/or flags. **It is against the law to damage or remove these markings.**
- Survey crews from APSSM will then visit the property to survey and map the utility locations.
- Our contractors may also use a state-of-the-art ground-penetrating radar (GPR) unit to detect and map underground utilities. This mobile GPR unit looks like a push mower.

**Safety is our top priority.** We want to ensure existing underground utilities are identified and considered in our design and construction plans and future permit submittals.

For properties where no pole locations or construction sites are proposed, these utility mapping surveys may not be necessary.

For more information about fieldwork and what you can expect, please visit our fieldwork webpage at [energizeeastside.com/fieldwork](http://energizeeastside.com/fieldwork).

For questions, comments and/or to talk with project staff about fieldwork, contact:

- Fieldwork information line: **1-800-548-2614 ext. 1**
- Email: [energizeeastside@pse.com](mailto:energizeeastside@pse.com)

APS will locate the underground utilities and mark the ground with a biodegradable, non-toxic paint and/or flags, as seen to the left.

#### About Energize Eastside

The Energize Eastside project will build a new substation and upgrade approximately 18 miles of existing transmission lines from Redmond to Renton. Combined with continued electric conservation, Energize Eastside will keep the lights in our Eastside communities for years to come.
