

# Vegetation Management

- PSE's vegetation management program generally requires that trees located in the wire zone with a mature height of greater than 15 feet be removed, unless terrain conditions allow 30 feet of clearance between the line and the mature height of the tree.
- Trees located within the border zone will typically be trimmed or removed to maintain a clearance of up to 20 feet from the nearest line.

**Wire Zone:** Section of a utility transmission right-of-way directly under the wires and extending to ten feet on each side.

**Border Zone:** A section of transmission right-of-way that extends roughly ten feet from the outside transmission wire.

**Danger Tree Zone:** Outside the border zone. Trees here that are predisposed to falling and likely to come in contact with nearby lines are proactively removed to reduce the likelihood of problems.
