

The Energize Eastside project is designed to meet the Eastside's growing need by using the right infrastructure at the right scale.

Line voltage		
Existing	Proposed	Not Proposed
 115 kV	 230 kV	<div style="display: flex; justify-content: space-around;"> <div style="text-align: center;">                           345 kV                     </div> <div style="text-align: center;">                           500 kV                     </div> </div>

Conductor size	
 Existing 115 kV conductor size: 1.063 inches.	 New 230 kV conductor size: 1.545 inches.

Substation size		
<p>The Eastside system currently has four 230 kV transformers at two substations.</p> <div style="display: flex; flex-direction: column; align-items: center;">   </div>	<p>Energize Eastside will build one substation with a new 230 kV transformer.</p> <div style="text-align: center;">  </div>	<p>The combination of a new substation and new transmission lines will provide enough capacity to meet the Eastside's need for years to come.</p> <div style="display: flex; align-items: center; justify-content: center;">  <span style="margin: 0 10px;">+</span>  </div>
