

About Eastside need

We need to act now

The Eastside is growing faster than any other region in Washington.

Even with PSE customers meeting 100 percent of conservation goals, growth studies project that demand for reliable power will exceed capacity as early as 2017.

This doesn't mean the lights will go out, but without substantial electrical infrastructure upgrades and aggressive conservation efforts, the Eastside's power system will lose redundancy, increasing the possibility of outages for as many as 60,000 customers.

How is the demand forecast calculated?

The demand forecast for the Eastside uses an equation that considers many factors.
