

Safety is always the top priority at PSE.

Across North America, high voltage electric transmission lines safely coexist with petroleum product pipelines like the Olympic Pipeline.

PSE has a long history of working closely with Olympic. PSE has shared this corridor with Olympic Pipeline for decades and the two companies have a shared interest in the protection and safe operation of the facilities in the corridor.

In addition to being your electric provider, PSE is also a natural gas pipeline operator. PSE and its contractors are very familiar with pipeline safety concerns and employ safe construction practices when performing work in the vicinity of pipelines.

These photos are from the 2010 Sedro Woolley-Horse Ranch 230 kV project, where Energize Eastside project manager Leann Kostek safely managed the construction of new 230 kV lines that crossed the Northwest Pipeline.
