

We've looked into using the Seattle City Light corridor. If it were rebuilt, the corridor could work to meet the Eastside's energy needs.

However, Seattle City Light has told PSE that their corridor is a key component of Seattle City Light's transmission system and not available for PSE's use.

PSE prefers to route new transmission lines along existing corridors whenever possible. About 70 percent of the route options we're considering have existing lower voltage transmission lines along them.
